CPSC 1301, Computer Science I Quiz

Quiz 2a

This is a timed test. You have thirty minutes to complete the test. Your deliverable will be a plain text file, that is, an ASCII file with a `.txt` file extension. When you finish the test, upload your deliverable to Canvas. Do not publish your answer to your `git` repository.

Name your quiz `quiz02a_lastname.txt`.

1. Create a Python script that contains three variables: `firstname`, `middlename`, and `lastnane`.

2. Initialize the values of these variables to any first name, any middle name, and any last name. You do not have to use your own names if you choose not to.

3. Add a simple function (does not return a value, accepts no arguments) that prints the values of the three variables.

4. Add a line that calls your function.

5. Run the script you created.

6. Print the values of the three member variables.

7. Call the function you created. Use the output redirection operator to redirect output to a file named `quiz02a_lastname.txt`.

8. Copy and paste your script to your deliverable and submit it.
